Note:
1. Output filtering capacitor C2 and input filtering capacitor C3 are electrolytic capacitors, it is recommended to use high frequency and low impedance electrolytic capacitor. For capacitance and current of capacitor please refer to manufacture's datasheet. Output capacitor withstand voltage derating should be 80% or above. C1 is ceramic capacitor, which is used to filter high-frequency noise. TVS is a recommended component to protect post-circuits if converter fails. External input NTC is recommended to use 10D-9; External input MOV is recommended to use S14K300.

2. LD03 models: Terminals 22 and 26 are internal rectification and filtering terminals. To protect the models further, it must connect an electrolytic capacitor C3 (it is recommended to be 6.8μF/400V). The special package LD03-10BxxAxS has no external capacitor pin. When the operating voltage is below 160VAC, it need to derate, refer to "Input Voltage Derating Curve".
