

LM317L

3-TERMINAL ADJUSTABLE OUTPUT POSITIVE VOLTAGE REGULATOR

GENERAL DESCRIPTION

The LM317L is an adjustable 3-terminal positive voltage regulator capable of supplying in excess of 100mA of load current with adjustable output voltage range between 1.2V to 37V. It is exceptionally easy to use and requires only two external resistors to set the output voltage.

An optional output capacitor can be added to improve transient response. The adjustment terminal can be bypassed to achieve very high ripple rejection ratios, which are difficult to achieve with standard 3-terminal regulators.

FEATURES

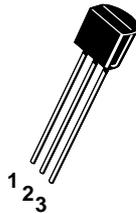

- Adjustable Output Voltage down to 1.2V
- Guaranteed 100mA output current
- Thermal Overload Protection
- Short circuit Protection
- Output Transistor safe area compensation
- Floating Operation for High voltage Application
- Line Regulation typically 0.01%V
- Load Regulation Typically 0.1%
- 80dB ripple rejection

* Regulation is measured at constant junction temperature, using pulse testing with a low duty cycle. Changes in output voltage due to heating effects are covered under the specification for thermal regulation.

** Thermal resistance of the TO-92 package is $180^{\circ}C/W$ junction to ambient with 0.4" leads from a PC board and $160^{\circ}C/W$ junction to ambient with 0.125" lead length to PC board.

TEST CIRCUIT

LOAD REGULATION AND ΔI_{ADJ} /LOAD TEST CIRCUIT

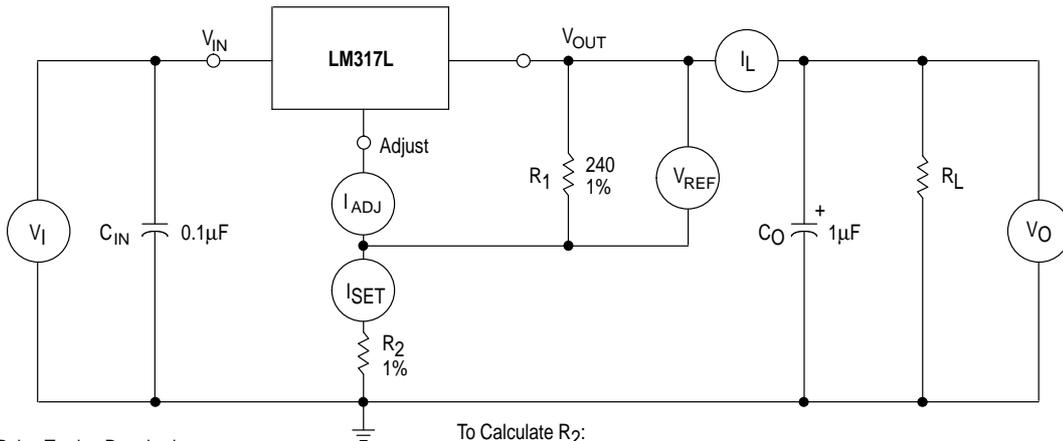

$$\text{Load Regulation (mV)} = V_O (\text{min Load}) - V_O (\text{max Load})$$

$$\text{Load Regulation (\% } V_O) = \frac{V_O (\text{min Load}) - V_O (\text{max Load})}{V_O (\text{min Load})} \times 100$$

* Pulse Testing Required:
1% Duty Cycle is suggested.

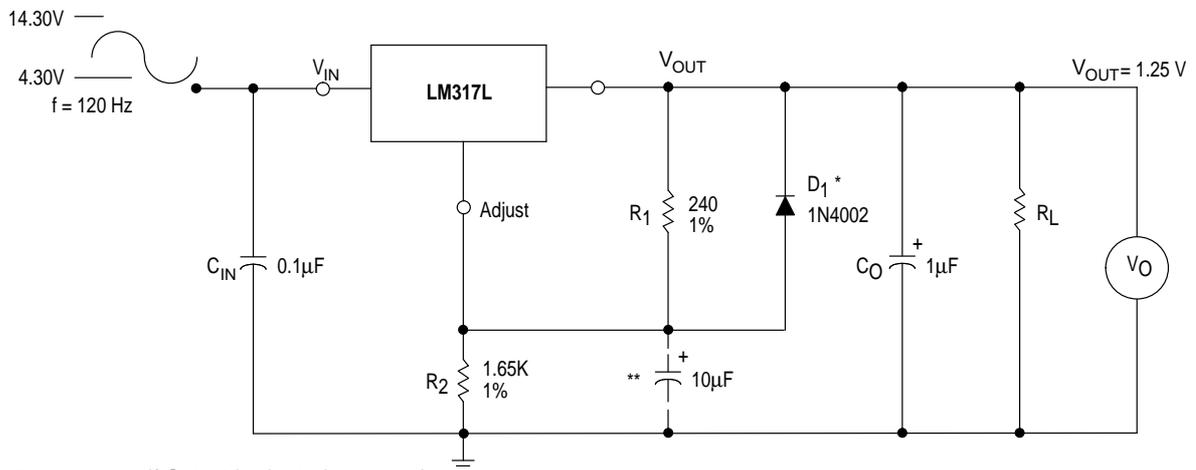

STANDARD TEST CIRCUIT

Pulse Testing Required:
1% Duty Cycle is suggested.

To Calculate R_2 :
 $V_{OUT} = I_{SET} R_2 + 1.250 \text{ V}$
Assume $I_{SET} = 5.25 \text{ mA}$

RIPPLE REJECTION TEST CIRCUIT

* D_1 Discharges C_{ADJ} if Output is shorted to ground.

** C_{ADJ} provides an AC ground to the adjust pin.
