

WS05R

Transient Voltage Suppressor

Features

- 250 Watts Peak Power per Line (tp = 8/20μs)
- Protects two I/O lines
- Low operating voltage: 5V
- Ultra Low capacitance(<1.5pF) for high-speed interfaces
- Solid-state technology

IEC COMPATIBILITY (EN61000-4)

- IEC 61000-4-2 (ESD) ±15kV (air), ±8kV (contact)
- IEC 61000-4-4 (EFT) 40A (5/50ns)
- IEC 61000-4-5 (Lightning) 12A (8/20μs)

Mechanical Characteristics

- JEDEC SOT-143 package
- Molding compound flammability rating: UL 94V-0
- Marking : Making Code
- Packaging : Tape and Reel per EIA 481
- RoHS/WEEE Compliant

Applications

- 10/100 Ethernet
- FireWire & USB
- Sensitive Analog Inputs
- Portable Electronics
- LAN/WAN equipment
- Video Line Protection
- Microcontroller Input Protection

Circuit Diagram

Schematic & PIN Configuration

| Absolute Maximum Rating | | | | |
|---|------------------|--------------|-------|--|
| Rating | Symbol | Value | Units | |
| Peak Pulse Power (t _p =8/20μs) | P _{PP} | 250 | Watts | |
| Peak Pulse Current (t _p =8/20µs) | I _{PP} | 12 | Α | |
| Lead Soldering Temperature | T∟ | 260(10sec) | °C | |
| Operating Temperature | TJ | -55 to + 125 | °C | |
| Storage Temperature | T _{STG} | -55 to +150 | °C | |

Electrical Parameters (T=25°C)

| Symbol | Parameter |
|------------------|--|
| PP | Maximum Reverse Peak Pulse Current |
| Vc | Clamping Voltage @ IPP |
| V _{RWM} | Working Peak Reverse Voltage |
| I R | Maximum Reverse Leakage Current @ V _{RWM} |
| V _{BR} | Breakdown Voltage @ I⊤ |

Electrical Characteristics

Application Information

Device Connection Options for Protection of Two High-Speed Data Lines

The WS05R TVS is designed to protect two data lines from transient over-voltages by clamping them to a fixed reference. When the voltage on the protected line exceeds the reference voltage (plus diode V_F) the steering diodes are forward biased, conducting the transient current away from the sensitive circuitry. Data lines are at pins 2 and 3. The negative reference (REF1) is connected at pin 1. This pin should be connected directly to a ground plane on the board for the best results. The path length is kept as short as possible to minimize parasitic inductance. The reference (REF2) is connected at pin 4. The options for connecting the positive reference are as follows:

- To protect data lines and the power line, connect pin 4 directly to the positive supply rail

 In this configuration the data lines are referenced to the supply voltage. The internal TVS diode prevents over- voltage to the supply rail.
- 2. The WS05R can be isolated from the power supply by adding a series resistor between pin 4 and $V_{\rm CC}$ -A value of $10k\Omega$ is recommended. The internal TVS and steering diodes remains biased, providing the advantage of lower capacitance.
- 3. In applications where no positive supply reference is available, or complete supply isolation is desired, the internal TVS may be used as the reference. In this case, pin 4 is not connected. The steering diodes will begin to conduct when the voltage on the protected line exceeds the working voltage of the TVS (plus one diode drop).

Data Line and Power Supply Protection Using $\ensuremath{V_{\text{CC}}}$ as reference

Typical Applications

WS05R on HDMI Port Application

HDMI ports have become standard features on today's consumer electronics devices, such as digital TVs, DVD recorders, and set top boxes. The small geometry of a HDMI graphic chip will make it more susceptible to ESD and cable discharge events. The high-speed transmission requires the protection device to have low capacitance to maintain signal integrity and low clamping voltage to reduce stress on the IC. The WS05R offers full protection against ESD and its low capacitance of 0.6pF, ensures signal integrity.

WS05R on USB2.0 Port Application

The WS05R can also be used to protect USB2.0 ports on monitors, computers, peripherals or portable systems. Each device is able to protect single USB2.0 port. When the voltage on the data lines exceed the bus voltage (plus one diode drop), the internal diodes are forward biased conducting the transient current away from the protected controller chip. The TVS diode directs the surge to ground. The TVS diode also acts to suppress ESD strikes directly on the voltage bus. Thus, both power and data lines are protected.
