### 3.4 Frequency Characteristics

3.5 Test Circuit

4 Reliability

4.1 Mechanical Shock: The components shall remain within the electrical specifications after three one-half

sine shock pulses(3000g's for 0.3 ms) in each direction(for six total) along each of the three mutually perpendicular axes for a total of 18 shocks.

4.2Vibration Fatigue: The components shall remain within the electrical specifications after loaded vibration at 20~55Hz, amplitude 1.5mm, X,Y,Z, direction, for 2 hours.

#### 4.3 Leak Test

4.3.1 Gross Leak Test: Submerge samples into at +85°C water for at least 1 minute. Carefully observe the samples. No bubbles should be seen.

4.3.2 Fine Leak Test: Expose samples for testing to 60 PSIG Helium gas for 2 hours. Then transfer the same

4.3.3 samples to another chamber and draw a vacuum. Measure the leak rate. Failure is defined if the leak rate exceeds  $5 \times 10^{-8}$  atm cc/sec Helium.

4.4High Temperature Storage: The components shall remain within the electrical specifications after being kept at the  $85^{\circ}\text{C} \pm 2^{\circ}\text{C}$  for 960 hours, then kept at room temperature for 2 hours.

4.5 Low Temperature Storage: The components shall remain within the electrical specifications after being kept at the  $-40^{\circ}\text{C} \pm 2^{\circ}\text{C}$  for 960 hours, then kept at room temperature for 2 hours.

4.6 Temperature Cycle: The components shall remain within the electrical specification after 32 cycles of high and low temperature testing (one cycle:  $80^{\circ}\text{C}$  for 30 minutes  $\rightarrow$   $25^{\circ}\text{C}$  for 20 seconds  $\rightarrow$   $-40^{\circ}\text{C}$  for 30 minutes) than kept at room temperature for 2 hours.

4.7Humidity Test: The components shall remain within the electrical specifications after being kept at the condition of ambient temperature  $70^{\circ}\text{C}$ , and 90~95% RH for 240 hours, then kept at room temperature and normal humidity for 4 hours.

4.8Solder-heat Resistance: The components shall remain within the electrical specifications after dipped in the solder at  $260^{\circ}\text{C} \pm 5^{\circ}\text{C}$  for 10 to 11 seconds, then kept at room temperature for 10 minutes.

4.9Solderability: Solderability of terminal shall be kept at more than 80% after dipped in the solder flux at  $230^{\circ}\text{C} \pm 5^{\circ}\text{C}$  for  $5 \pm 1$  seconds.

4.10 Storage: The components shall meet the electrical and mechanical specifications after 5 years storage, if stored within the temperature range of  $-40^{\circ}\text{C} \sim +85^{\circ}\text{C}$  and in the humidity of 20 to 60% r.h.

## 5 Remarks
