Amendment Items: DG306/126 pins improvement.

Before Amendment

After Amendment

**Explanations:** After assessment of our R&D Dept, the position of avulsion on pin is too high, so the strength on the area of screw thread hole isn't good. Now we shorten pin, the position of avulsion keeps away from screw thread hole, it's easy for molding in process of stamping bending, in addition, it can improve product strength and keep product property more stable. It's OK that we test the products with shortening pins, the exposure pin length of former product is 3.90mm, it's 3.40mm after change.

Applied By: Jiang Xiong
